

Professional Services Business Analyst (Frankfurt)

Company Profile

Founded in 1997, Calypso Technology is a rapidly growing, profitable, privately-held company which provides leading edge software solutions to the global financial services industry.

Calypso provides a single turn-key Java-based platform for trading and trade processing and provides real-time, event-driven processing that enables global financial institutions to provide integrated solutions across all asset classes, from foreign exchange and equities to fixed income and credit derivatives.

Calypso provides software solutions to many of the premiere financial institutions world-wide including Citigroup, Dresdner Bank, HSBC, ING, Royal Bank of Scotland, Wachovia, Bear Stearns, Sumitomo Trust, BNP Paribas, Barclays Global Investors and Wells Fargo.

In addition to our headquarters in San Francisco, our 300+ person global workforce is strategically located in New York, London, Paris, Frankfurt, Sydney, Singapore, Tokyo, Johannesburg, Copenhagen and Mumbai. Our global presence offers international exposure, experience and travel for many of our employment positions. Relocation assistance is also offered for many of our positions.

Job Description Overview

Calypso Technology is seeking a Post-Sales Back or Front Office Business Analyst with relevant work experience in the capital markets industry or at a financial software company. This should include support and/or implementation of front or Back Office Systems for Derivatives in one or more of the following: FX, Interest Rates, Credit or Equity.

Calypso offers global opportunities for our Professional Services team which are located in New York, London, Paris, Frankfurt, Sydney, Singapore, Tokyo, Johannesburg, Copenhagen, Korea and Mumbai.

Responsibilities:

- In-depth, hands-on involvement directly with customers implementing the Calypso system. Work directly with users of the Calypso system to gather and document their business requirements, and implement those requirements. Follow up with the users to test the implementation, achieve signoff, and continue to move the system toward go-live.
- Work hands-on with the system, configuring and testing it to ensure it meets the business requirements. This will include areas such as the setup of static data like counter party info and settle delivery instructions, configuration of message generation rules, configuration of accounting rules, setup of position management and liquidation rules, etc.

- Help customers identify functional gaps in the core back office product, and create detailed functional specifications for the gaps.
- Train users on basic use of the system, new functionality, etc.

Skills & Requirements:

- 4+ years working in systems or business analysis, preferably in the capital markets industry
- Detailed hands-on knowledge about industry-standard back office processing functional areas, including settlements (SWIFT, ACH, FedWire), documentation (confirmation, advices, reset advices, etc.) and accounting (general ledger, PnL accounting, etc.). Functional experience should encompass any or all of the following asset classes: credit derivatives, interest rate derivatives, equity derivatives, fixed income, or FX.
- Experience in settlement management and accounting processing, covering one of the following would be an advantage; CLS, Target./EBA, EuroClear, GSCC.
- Technical skills (Java/C++) is a plus. Experience designing/building back office systems will be especially valuable.
- Strong ability to map conceptual financial and business elements to practical system capabilities. Should be able to translate back office business requirements into actual system configuration.
- Excellent interpersonal skills. The person in this role will spend a significant amount of time working hands-on educating and training customers.
- Willingness and ability to travel periodically, as required.

Benefits

Calypso Technology is an equal opportunity employee (EOE) and strongly supports diversity in the workforce.
